## Central High School Walk Audit of Central Ave./MD 214 Debrief

## WABA Youth Organizer, Joseph Hamd coordinated the audit

#### Central High School, Cabin Branch Road (county)

### Cabin Branch Road

Ballard Foreign

Sidewalks are narrow with a narrow grass buffer and painted shoulder. Could benefit from additional sidewalk width.

missing sidewalk segment on east side of street. Utility pole locations imply that right-of-way is available for installation.

Existing street is overly wide, so sidewalk could also be constructed within the existing curblines, and a temporary walkway could be provided with paint and flexible delineater posts as an interim condition. Upon conclusion of the walkshop, students were observed walking in the street and in the grass within this missing sidewalk demonstrating a clear need for facilities.

Debris in curb ramp is indicative of stormwater inundating this ramp during storms.

No crosswalk provided across Cabin Branch Rd on either side of driveway, and no curb ramps on west side of street

No crosswalk provided across school driveway

Missing curb ramps across parking lot driveways along the east side of the school driveway

Q

no crossing provided between east and west side despite clear desire-line

# Cabin Branch Road (county) connecting school to MD 214

- Missing sidewalk on east
- No crosswalk from west sidewalk to school drive
- Overly wide road
- No buffer on west sidewalk
- Path connections from West & South

#### MD 214 & Cabin Branch Rd Intersection

### MD 214 & Cabin Branch Rd

- No crosswalk
- No signal (for peds, left turns, bus stops)
- Overly wide, high speeds
- No bus stop amenities
- Large corner radii
- Long crossing distance

### **Central Avenue**

- Narrow sidewalks
- No/small buffer
- Multiple driveway aprons

#### Student observations:

- Narrow sidewalks
- Too close to cars
- Driving fast

- Overly wide roadway -6 lanes for 4 lanes of traffic volume
- High speeds: 58 mph 85th percentile, 30 mph limit
- Large turning radii
- Long crossing distances

### Central Av. & Addison Rd

Sidewalk includes no buffer from curbline and no painted shoulder resulting in uncomfortable walking conditions.
Driveway aprons to non-existent driveways are prevalent, creating uncomfortable walking conditions and drainage issues. Some existing driveways appear unnecessarily large. For example, the Dunkin exit driveway serves egress movements only and could be narrowed. Similarly, the Blue Sky Liquor store has two driveways which could either be narrowed or consolidated.

Inlets along Central Ave at this signalized midblock crossing are located immediately downstream of the crosswalk, meaning students must cross a stream in the rain. Inlets should be upstream of curb ramps. Also, push buttons appeared to be non-compliant for the minimum 10-inch reach requirements.

Discount Auto Sound

Travel lanes appeared to be wider in this section of Central Ave compared to those further East of Cabin Branch Rd. This would be less noticeable if a sidewalk buffer or painted shoulder were provided.

station and .

Sidewalk is provided on east side, but only 4' wide Not ADA compliant as currently provided

 the minimum 10-inch reach requirements.
Pole in middle of sidewalk, and narrow widths, on the Northeast corner make conditions uncomfortable for pedestrians.

1) Diagonal curb ramp (i.e. one curb ramp that serves both directions of

travel) exists on the Southwest corner. Diagonal ramps are not permitted by

infeasible. Appears curb radius could be reduced to provide separate ramps.

2) Most push buttons at this intersection appear to be non-ADA compliant for

the ADA unless two separate ramps or a blended transition are technically

DEH Tire And Auto Repair

Intersection of Addison Rd and Central Ave:

#### Road Diet example - 6 to 4 lanes + bike lanes

#### **MD 187 TYPICAL SECTION**

## Quick-Build Curb Extension

## **Design & Control Evaluation**

- Choose most appropriate motorized design and check vehicle for the location
- Smallest feasible curb radius should be selected for corner designs based upon the design vehicle's effective turning radius

### Curb extension with parking lane

Source: 2017 Urban Street Design Standards, Prince George's Department of Public Works and Transportation (DPW&T)

#### Safer intersections and turns

- Tighter corner turning radius of 15 feet to be a maximum rather than minimum
- Prohibits slip lanes (high speed right turn lanes) and discourages multiple left turn lanes
- Wide crossing distances and high speed turns are a major threat to pedestrians

# **Intersection Pavement Markings**

Intersection Type	Condition	Separated Bicycle Lane	Conventional Buffered Bike Lane	Bicycle Boluevard
Signalized	Turn Conflict		1111111	No Markings
	No Tum Conflict		•••••	No Markings
	Bikeway Corridor Turns Left	***	*1	

#### Discussion

#### Thanks to WABA for organizing the walk audit
